

## COMPANY HEALTHCARE OVERVIEW

### ***Company Overview***

Axean Pacific, Inc., began its business operations in 2000. API provides technology consulting services focused on distributed computing, web application development, project management and compliance, business intelligence, and business process outsourcing. API partners with industry leaders such as Dell, hp, and Microsoft to deliver its solutions. API prides itself on its ability to architect and deliver quality solutions to its customers that are relevant, cost-effective, efficient, and aligned with the business.

For the past several years, API has developed **expertise** in the **healthcare industry**, designing and delivering healthcare computing solutions, including large-scale distributed computing infrastructures, clinical information systems applications, web-based patient and client tracking, and program/project oversight for Medicare Risk and **IT HIPAA readiness, and SOX** initiatives. API's real-world experience includes clinical information systems, HIPAA readiness, SOX security and access compliance, and technology leadership, management and consulting for payers and providers. API's key customers include Kaiser Permanente the State of Hawaii Department of Health, Sutter Health, Wells Fargo Bank, Southwestern Bell (Pacific Telesis), Franklin Covey Co., and others.

API uses proprietary methods and tools, combined with industry and client specific practices, to help simplify the planning and implementation of all its projects. These methods have been refined over time through practical application in real environments, and provide APIs personnel with the ability to easily define a project, initiate the design and modeling of application and infrastructure components, and deliver product in a crisp, managed lifecycle. API's tools and services assist in the delivery of practical distributed computing and web/database solutions. The experiences gained with its clients, combined with API's proven methodologies, toolkits and qualified team members, enable API to fully support and participate in large-scale healthcare computing initiatives.

While providing solutions to our clients, API has been successful in transferring knowledge to its customers to ensure ongoing operations after project completion.

### ***Capabilities***

API brings the following relevant skill sets and technical experience to their engagements:

- Project Management, PMBOK and Structured Methodologies
- Business Requirements Definition and Specification
- Healthcare Computing and IT HIPAA Readiness Expertise
- SOX Security and Access compliance
- Business Intelligence
- Business Process Outsourcing
- Infrastructure Architecture and Design
- Business Systems Application Architecture, Design and Development
- UNIX, Windows and mainframe platforms
- Managed desktops and thin-client deployments
- Database Design Development, Implementation, Tuning and Administration
- Oracle, Sybase, DB2 and other major database systems
- IBM, Oracle and Sun directory and identity management products
- Deployment technologies: Load Balancing, Clustering, Systems Management, and Messaging
- IT Development, QA and Production Environment Management
- Configuration Management
- Security Analysis and Implementation (Policy, PKI, Authentication, Encryption, Firewalls)
- Knowledge Transfer, Documentation, Training, and Code Delivery

Membership in Industry Leading Organizations such as IEEE, PMI, HMSS, and HL7 API brings experienced, professional resources to each engagement that have true hands-on experience with the methodologies and technologies required to deliver successful solutions.
